

$$ne=9, nno=8$$

$$n_{gl} = 8 \times 3 - \left(\underbrace{2}_{u_{Ax}=u_{Ay}=0} + + \underbrace{1}_{u_{By}=0} \right) = 21$$

Considerando 2 subestruturas simples:

$$n_{eq} = \underbrace{3}_I + \underbrace{3}_{II} = 6$$

$$n_{var} = \underbrace{8}_I + \underbrace{4}_{II} = 12$$

$$g_h = n_{var} - n_{eq} = 12 - 6 = 6$$
